

The Pharma Specialists

Maintaining an unbroken temperature control chain is a critical challenge. The healthcare temperature control is constantly growing, since it is a necessary prerequisite to Good Distribution Practice (GDP) on pharmaceutical industry. We are able to offer specifically tailored services which can secure profitable and sustainable business. Achieving these rewards necessitates a strong partner with in-depth knowledge of the healthcare industry and whose expertise is trusted.

Now is the time for active thinking.

You can rely on us:

- Temperature-controlled distribution according GDP regulations
- Temperature-controlled storage and transshipment at certified locations
- Wide range of temperatures from 2°C to 25°C
- Innovative packing and temperature monitoring
- GDP-trained staff and partners
- Full documentation and supplier GDP reports

AERONET GROUP can handle your entire logistic chain

Warehousing and transloading

- We offer warehousing through our partners network at key sites. Even at very short notice, we have warehousing available. All warehouses and audited partners have GDP/GSP trained staff.
 - As part of our storage and transloading services, we offer services such as line-item checking, packaging inspections, packing or repacking for export, consolidation and quality control.
-

Innovative equipment

- Our qualified packaging systems and temperature-controlled containers and active and passive packing material meet the unique and demanding GDP/GDS challenges of the life science industry.

We guarantee:

- **Transportation of pharmaceuticals and medical equipment around the world**
- **Transport of material to a controlled temperature**
- **Temperature control throughout transport, management and storage**
- **Storage from the warehouse or factory with temperature-controlled trucks**
- **Delivery times within predefined schedules**
